# FOREWORD

BRS's Land & Water Sciences Division provides information and advice on Australia's land and water resources to governments and the community. Through our geological and environmental research, and information management, we facilitate the productive and sustainable management of these resources. We give particular emphasis to:

- research into land and water resources processes and environmental responses;
- developing innovative geoscientific survey techniques and applying them to land management and risk mitigation;
- cross-jurisdictional land and water geoscience issues;
- facilitating and developing national guidelines and standards for geoscientific data and information; and
- developing improved national land and water resource databases.

This report is the tenth in a series of groundwater quality assessments from catchments across the nation. The series includes:

A Groundwater Quality Assessment of the Alluvial Aquifers in the Logan-Albert Catchment, SE Queensland

A Groundwater Quality Assessment of the Fractured Rock Aquifers of the Piccadilly Valley, South Australia

A Groundwater Quality Assessment of the Jandakot Mound, Swan Coastal Plain, Western Australia

A Groundwater Quality Assessment of Shallow Aquifers in the Darwin Rural Area, Northern Territory

A Groundwater Quality Assessment of the Upper Onkaparinga Region, Southern Mt Lofty Ranges, South Australia

Groundwater Quality of the Murray-Riverina Catchment, NSW: Wakool-Cadell and Denimein-Berriquin Regions

A Groundwater Quality Assessment of the Murray Region, NSW

A Groundwater Quality Assessment of the Goulburn Catchment, Victoria: Kyabram-Tongala

A Groundwater Quality Assessment of the Goulburn Catchment, Victoria: Nagambie-Mangalore

Peter O'Brien  
Executive Director,  
Bureau of Rural Sciences

## ACKNOWLEDGMENTS

This report is the outcome of many people's contributions and assistance. Most notably we would like to thank the Technical Resources Group of AGSO for their high quality work. AGSO's field sampling and processing team comprised Peter Ryan, Peter Green, Tim Ransley, John Spring, John Jaycock and Sue Powell. AGSO's laboratory staff involved in this project were John Spring, Eleanor Laing and Nerida Davies. Some of the figures for this record were prepared by members of the Spatial Information and Mapping Systems, AGSO. The geology map was compiled by Rob Kingham at AGSO from New South Wales and Queensland 1:250,000 digital geology.

We thank NSW-DLWC and QDNR for providing data, reports and background information on the area, technical assistance in the field, statistical input and useful comments on the first draft of this report. The staff at NSW-DLWC who provided this assistance were Mike Williams, Phil Calaitzis, Selwyn Smith and Colin Leitch. The staff at QDNR included John Hillier, David Free, Andrew Crane and Ross Carruthers. Paul Castor and Bob McGufficke, at NSW Dept. of Agriculture and Fisheries, provided information on pesticide usage.

Chlorine-36 analyses were carried out by Richard G. Cresswell, one of the authors, when he was a member of the Department of Nuclear Physics at the Australian National University.

Finally, we would like to thank the following colleagues for their constructive advice: Jim Ferguson, Jim Kellett, Karen Ivkovic and Ray Evans.
